Project Dashboard

Project Dashboard is the Project Home Page. It's the main Project crossroad, where project members can find all necessary Project links with a proper short description.

TDS Project Dashboard template can include the following items:

- Project Wiki
- Project Issue tracker (Jira)
- Project RoadMap
- Project Plan
- Project Pipeline
- Release Management
- Operational Dashboard
- Development Dashboard

All items can be edited by Project admin and external links can be used there.

All links will be added in the project description text area with rich text editing and predefined text template.

Additionally, each user will be able to make any entity, application or server as his favourite.

Users favourite items will be visible in the project dashboard.

Project Dashboard page includes the following parts:

1. Project Description
2. Stickers
3. My Favorites
 - a. SaaS
 - b. Applications

The screenshot shows a web interface for a DevOps Space. At the top, there is a blue header with the text "tieto DevOps Space" on the left, "tieto demo" in the center, and a user profile icon on the right. Below the header is a sidebar with navigation options: DASHBOARD (selected), SAAS, SERVERS, APPLICATIONS, DETAIL, RESOURCES, USAGE, LOGS, NETWORK, STORAGE, USERS, and BILLING. The main content area is titled "Project dashboard" and contains a description box with the text "Project dedicated for TDS demonstration purposes." Below this is a "STICKERS" section with six cards: "Wiki" (Project documentation), "Project Plan" (Demo project plan written in Confluence), "Test Plan" (Demo project Test Plan), "Delivery Pipeline" (Project Delivery Pipeline templates), "Sprint Flow" (Build and deployment flow in Sprint), and "Continuous Integration" (Project CI using master Jenkins server connected with Jenkins slaves). At the bottom, there is a "My favorites" section with a "SAAS" filter and a card for "TietoWeatherForecastDEMO2" with a star icon and a red plus button.
