

Jira Server evolution to Data Center

Your Jira Server has been evaluated and transitioned to [Jira Data Center](#).

We want to assure you that this transition will not result in any significant differences in your current Jira project or the way you work. The functionality and user experience will remain consistent with what you are accustomed to.

As part of this transition, we would like to highlight that Atlassian has included **Advanced Roadmaps** in Jira Data Center as a default feature. After careful consideration, we have decided to discontinue the use of the Easy Agile Roadmaps plugins. The Advanced Roadmaps feature offers enhanced capabilities and functionality, which we believe will effectively meet your project planning and management needs.

To mitigate any disruptions resulting from the absence of the Easy Agile Roadmaps plugin, we would like to extend the availability of the plugin for an additional month. The Easy Agile Roadmaps will be valid for you till 15th of March 2024. This extension will afford you ample time to transition your data to Advanced Roadmaps, explore its additional functionalities, and familiarize yourself with its features.

For more detailed information about the Advanced Roadmaps, please refer to the following link:

[The full overview: Roadmaps in Jira Software](#)

[Get started with Advanced Roadmaps](#)

The Easy Agile Roadmaps won't be available for you after 15th March. Please set the Advanced Roadmaps based on your project needs soon.

If you should have any questions or require further clarification, please don't hesitate to reach out to us: [TDS Support mail](#) or [TDS Help Center](#)

Thank you for your attention to this matter.
