

How to solve cygwin unprotected key problem?

How to solve cygwin unprotected key problem?

I can't connect to server using SSH key from Cygwin. I found, that I can't change ssh key file permission.

```
WARNING: UNPROTECTED PRIVATE KEY FILE!  
To resolve this copy your SSH key to /tmp/mysshkey:  
mkdir /tmp/fermin  
cp ~/.ssh/id_rsa /tmp/fermin  
chmod 600 /tmp/fermin/id_rsa  
ssh -l fermin -i /tmp/fermin/id_rsa localhost
```
